## How to Customize your Course Entry Point

Your course may open by default on a Dashboard page, or a Content page. You can choose which page users enter your course on.

### How to Choose your Course Entry Point

1. In your Course Menu, navigate to Customization
2. Expand the menu and choose 'Teaching Style'
3. Under Teaching Style look for **'Select Course Entry Point'**
4. Choose the page you would like users to see when they enter your course from the drop-down menu.
5. If you choose an entry point that has no content, the course will default to open on the next page on the list that contains content.

For example, if you have not added content yet and your entry point is the content page, the course will open on the Discussion page.
